

# activeworlds inc.

*building the 3D Internet*

- Activeworlds in development since 1994, company incorporated January 1997
- Over 10 years of development time
- Proven stable technology
- Used by thousands of schools and corporations worldwide
- User friendly interface
- Client works on Windows 95/98/ME/NT/2000/XP
- Server for Windows, Unix, Solaris, Linux
- Servers can be easily transported and hosted off site
- Dynamic building environments in real-time
- Property management tools which allow objects to be "owned" by builder
- Uses standard Internet protocols and content forms (HTML, BMP, GIF, PNG, JPEGs, Midis, MP3, Wave files, RWX, DFF, COB, 3DS)
- Streaming content (WMV, MPG, AVI, MP3)
- Modifiable terrain (also accepts DEM)
- One environment can support up to 65,000 simultaneous users
- One world can support over 5 billion square meters of land space (this is larger than the state of California in Virtual land)
- Support Voice over IP (VOIP)
- Team building functions
- Comprehensive database tracking of users using standard solutions like MySQL
- Comprehensive SDK used for plug-in of external programs into Activeworlds
- Small downloadable client (less than 4 MB)
- Client supports multiple languages and will automatically localize to the language set by the client computer (French, Italian, Portuguese, Spanish, Swedish, Norwegian, Chinese, Japanese, Korean, Danish and Finnish).
- Ability to screen users by ID and IP
- Ability to screen foul language
- Ability to embed Internet Explorer web pages and functionality either in 2D portion of browser or 3D window without leaving the 3D world.
- Users can select unique avatars from list or custom design them to have their own personal avatar.
- Users can build in the environment in real time using built in user friendly tools
- Ability to have in world games
- Low system requirement (Pentium II CPU 300mhz with 64MB of RAM.
- Works with dialup modem
- Very small server footprint
- Instant messaging
- File transfer between clients
- Physics module
- Particle emitter module
- Zones and privacy areas
- Integrated billing system
- Large install base (over 3,000,000 clients downloaded)
- Built-in tunnel server for firewall support
- Customizable toolbar
- Integrated search feature based on World information
